- 1** During our first meeting you'll learn to properly set-up your BERNINA Rotary Punch Tool, find out what all those pieces in your box are really for and what's built into the capabilities of the Rotary Punch Tool. Setting security on your machine is also covered. Learn essential roving handling techniques, which style punch needles to use for simple shingles and shingles with a twist; plus a few line effects including how to vary the degree of ruche and add twist. Proper cleaning of your machine at the end of each work session; and additional cleaning tips after extended use are both covered.
- 2** In our second meeting, we'll explore ruche effects using the built-in guides, create felt and also use various methods to produce ruche effects with silk. Paula also introduces the use of textile inks, a bit of liquid color applied to a pressed felt button. She shares important tips to best select from the two punch needle styles included in your set, for various tasks (Paula developed these needles for BERNINA and knows them well). Techniques are highlighted in ways to show how to best gear punch techniques you will be learning for a particular type of project.
- 3** Learn to assemble your iPad/tablet case using various BERNINA feet that will make you look like a pro. This assembly method can easily be altered in scale; with additional personalized features added on for your future creative projects. Lots of sewing tips throughout, a detailed assembly handout is also included.
